

7850 NETWORK SERVICES GATEWAY-E200/300

Why choose the 7850 NSG-E200/300

- SDN-based branch networking for the cloud IT era
- E200 optimized for locations needing up to 500Mb/s; E300 optimized for locations that need up to 1Gb/s
- SFP-based Gigabit Ethernet (GigE) optical uplinks
- Flexible configuration of GigE ports
- Policy-based branch traffic offload
- Encryption services for ingress/egress traffic
- Future expansion support using USB interfaces

Nuage Networks 7850 Network Services Gateway (7850 NSG-E200/300) enables branch office networking to evolve to meet the challenges of wide area network services in Cloud IT environments. Based on the industry's most comprehensive software-defined networking (SDN) solution, the 7850 NSG-E200/300 seamlessly integrates into the Nuage Networks Virtualized Network Services (VNS) solution. The 7850 NSG-E200/300 is used to connect private and public datacenters to branch locations. The solution offers multiple service scenarios, namely Layer 2 VPN, Layer 3 VPN, and Internet breakout. The 7850 NSG-E200/300 is one of the models and form factors for the NSG series, including the 7850 NSG-C, NSG-E, 7850 NSG-X, and the virtual NSG. Using the NSG-V software image, the virtual NSG can be deployed as a software-only form factor on a customer-provided appliance or as a virtual machine.

The Nuage Networks 7850 NSG-E200/300 has a small footprint, and can be shipped and installed at an enterprise branch location without requiring any network engineering expertise. Because the 7850 NSG-E200/300 is centrally managed, it improves the efficiency and productivity of branch operations while eliminating the need for any on-site IT support. The 7850 NSG-E200/300 is on-boarded using a secure bootstrapping process that uses zero, one- or two-factor authentication depending on the branch and installer trust-model and security posture. Once bootstrapped, it enables instant networking capabilities at the branch.

The 7850 NSG-E200/300 easily connects to any provider's IP underlay network (private, public or hybrid) over any access using its WAN-facing ports. The policy-based network automation capabilities are seamlessly extended to the branch allowing users to automatically connect to any applications in any cloud (public or private). Thus, the delivery and consumption of network services is greatly simplified.

In addition, multiple network functions can be service chained and, using policy-based routing, traffic can be routed to one or more appliances, (such as firewalls or IDS/IPS systems), or virtualized functions at any location before being forwarded to the final destination.

For branch locations that have high availability requirements, the 7850 NSG-E200/300 can be deployed in a high-availability configuration providing device, link, and subnet-level resiliency models. The 7850 NSG-E200/300 also supports network uplink redundancy for protection of WAN services.

The LAN-facing ports of the 7850 NSG-E200/300 can be used for logical and physical isolation and segmentation of users or applications to support creation of security zones aligned to the enterprise's IT practices.

For enterprises that require IPsec encryption for overlay traffic, the 7850 NSG-E200/300 has built-in hardware-based cryptographic acceleration capabilities, ensuring optimized forwarding for both unencrypted and encrypted communications. The 7850 NSG-E200/300 supports path selection to ensure that priority traffic is forwarded over the desired underlay network with selectable failover modes.

Nuage Networks VNS

Nuage Networks VNS provides a comprehensive networking service that removes the limitations that exist with traditional wide area networks. Nuage Networks VNS offers:

- Extensive service functionality that enables flexible branch networking
- Unlimited geographic reach by abstracting the virtualized network service from the underlying IP connectivity, enabling freedom to use more than a single connectivity service
- Ability to adapt to the dynamic business environment and respond quickly to simple move, add and change requests
- Support for virtualized network functions, which eliminates the need for additional hardware (firewalls and routers) and associated professional services

Features

Small branch optimized density - The small footprint and energy efficiency of the 7850 NSG-E200/300 provides flexibility for both cabinet (rack mount) or desktop installations. With the flexibility for dual WAN uplink and four dedicated LAN ports, the 7850 NSG-E200/300 provides options for both logical and/or physical separation of network services within the branch.

Proven operating system - The 7850 NSG-E200/300 utilizes the widely used network operating system of the Nuage Networks VNS SDN solution. Operators can be confident that the 7850 NSG-E200/300 is completely interoperable with global IP network services and that its robust networking environment has been field proven.

Management efficiencies - As part of the Nuage Networks VNS, the 7850 NSG-E200/300 is centrally managed. Network engineering expertise is not required at the branch during installation or for day-to-day operation. Configuration changes are centrally administrated and pushed to the branch using policy.

Network function optimization - The Nuage Networks VNS solution provides SDN-based optimization of network functions. With Nuage Networks VNS, complex functions can be virtualized and chained into the branch office connection. For branch-specific requirements, the 7850 NSG-E200/300 supports advanced functions such as DHCP server, quality of service, and advanced firewall rules. The flexibility of SDN provides the opportunity for deployment of third-party functions on the 7850 NSG-E200/300 should market demands arise.

Selective uplink forwarding - Today's Cloud IT consumption models are straining traditional IP-VPN uplinks. With the 7850 NSG-E200/300, the option to split traffic across a primary WAN uplink and a secondary link, such as business internet services, is possible. With options to encrypt this traffic based on the transport method, the 7850 NSG-E200/300 provides flexibility to grow the bandwidth to the branch without compromising corporate integrity.

Traffic security - The 7850 NSG-E200/300 and the Nuage Networks VNS solution support per-connection encryption based on IPsec. Through the solution's central policy engine, the enterprise has complete control of which traffic is encrypted.

Multiple WAN uplink support - As an SDN-based solution, the 7850 NSG-E200/300 supports a mix of multiple WAN uplinks. These can include a primary link using private and alternative (either active/active or active/standby) connections over diverse access IP technologies, such as the Internet or mobile broadband.

High availability at the branch - For branch locations that have high availability requirements, the 7850 NSG-E200/300 may be deployed in active/standby pairs, allowing for protection of WAN/LAN services in the event of device or circuit failure. Seamless failover and recovery of all failure scenarios provide WAN administrators with peace of mind.

Physical LAN isolation - With multiple LAN ports, the 7850 NSG-E200/300 provides the versatility to assign specific ports to individual hosts within the branch environment. This can provide isolation for IP voice trunks (IP-PBX) or IP security cameras. It can also be used to provide completely separated network environment(s) from the business LAN, which could then be used for public kiosk access or public Wi-Fi® networking.

Software technical specifications

Automation	<ul style="list-style-type: none"> ■ Secure activation and authentication (X.509) ■ Software lifecycle management ■ Policy server northbound ReSTful API and push-based notification-driven event bus
Management	<ul style="list-style-type: none"> ■ Unified management plane for datacenter (Nuage Networks Virtualized Services Platform) and WAN (Nuage Networks VNS) ■ Centralized, template-based policy management for all managed objects (including service, security and QoS) ■ Multi-tenanted with role-based administration, optional LDAP integration
Network services	<ul style="list-style-type: none"> ■ Full-mesh and hub-and-spoke topologies ■ Layer 2 and Layer 3 Virtual Private Network (VPN) services ■ Local Internet breakout service ■ 802.1Q locally significant VLANs ■ Overlay services supporting VXLAN and VXLANoIPsec encapsulation ■ DHCPv4 Server, PAT, 1:1 NAT, underlay offload ■ Dynamic NAT traversal ■ Flow-based WAN uplink load balancing, advanced traffic steering ■ IPv6-ready hardware with software support in future releases
Quality of Service	<ul style="list-style-type: none"> ■ DSCP-based classification with DSCP rewrite options ■ Ingress QoS classification and rate limiting ■ Hierarchical QoS color-aware egress shaping based on 4 WRR queues ■ Network control queue for control plane traffic
Security services	<ul style="list-style-type: none"> ■ Directional Layer 2 to Layer 4 traffic classification with accept/deny/redirect actions ■ Template-based domain-wide ingress and egress reflexive ACL ■ Advanced dynamic security policy creation ■ Policy auditing through template inheritance
Encryption	<ul style="list-style-type: none"> ■ Secure key generation and distribution ■ IPsec authentication: SHA1, SHA2 ■ IPsec encryption: 3DES, AES-128, AES-192 and AES-256 ■ Authenticated and encrypted control plane connections
Analytics and visibility	<ul style="list-style-type: none"> ■ Real-time analytics engine based on Hadoop® cluster ■ Central usage statistics collection for ports, flows, QoS queues ■ Event-based logging ■ Secure syslog integration ■ Remote port mirroring
High availability	<ul style="list-style-type: none"> ■ Cluster-based policy and statistics collection infrastructure ■ Policy federation supporting geo-redundancy and load-balancing ■ Scale-out control-plane architecture leveraging federation based on MP-BGP ■ High availability configuration with per subnet resiliency ■ WAN uplink redundancy options with selective uplink forwarding ■ Independent active/active management and control plane connections per system

Hardware specifications

CPU specifications	Intel Atom CPU with built-in Quick-Assist cryptographic acceleration
Physical ports	<ul style="list-style-type: none"> ■ 2 x dual PHY (10/100/1000BASE-X or 10/100/1000BASE-T) GigE ■ 4 x 10/100/1000BASE-T GigE (RJ45) ■ 2 x USB 2.0 Standard-A female ■ 1 x RS-232 RJ-45 console
Dimensions	250 mm x 190.4 mm x 44 mm / 9.8 in. x 7.5 in. x 1.7 in. (width x depth x height)
Weight	2.3 kg / 5.06 lb
Operating temperature	0° C ~ 40° C / 32° F ~ 104° F
Operating relative humidity	5% – 90%, non-condensing
Storage temperature	-20° C ~ +70° C / -4° F ~ +158° F
Power	<ul style="list-style-type: none"> ■ Draw: 60 W (maximum) ■ Input: 100 ~240 V at 50-60 Hz
Cooling	1 x fan; maximum 37.5 dBA
